

Building a Safety Program for Your Organization

Legal Notices/Disclaimer

Accident Fund Insurance Company of America is a member of Accident Fund Holdings, Inc. All policies are underwritten by a licensed insurer subsidiary of Accident Fund Holdings.

Accident Fund grants you permission to print a copy of the textual materials contained in this document for your personal or non-commercial use within your organization. In return, you agree not to remove any service marks and other proprietary notices which are contained in such materials.

Materials and information in this document are provided for general informational purposes and as a public service to Accident Fund policyholders. The materials and information are without warranty of any kind, either express or implied, including, but not limited to, the implied warranties of merchantability, or fitness for a particular purpose, title, or non-infringement.

In no event will Accident Fund Insurance Company of America be liable to any party for any direct, indirect, special, punitive, or other consequential damages that may result from any use of the materials or information in this document.

The loss prevention advice presented in this document is intended as general information of interest to Accident Fund policyholders' business managers and others responsible for controlling or minimizing the potential for injuries to persons and property occurring in the workplace. In providing this information, Accident Fund does not warrant that all potential hazards or conditions have been evaluated or can be controlled.

Congratulations!

You have been trusted with the responsibility of your organization's safety program. This book is designed to help identify the strengths and weaknesses of your organization's existing program. If you do not have a safety program, this book will help you easily establish one.

But you cannot do this alone. You will need *visible* commitment from top management, middle management, and frontline management within your organization in the form of time, ownership of the program and financial support.

Safety is not a stand-alone program. Safety accountability and responsibility are a part of *every* employee's job and *every* department within the organization. For example:

- Purchasing is responsible for developing and implementing control measures to ensure all parts,
 equipment and new material are analyzed for potential hazards, and that they comply with all applicable
 local, state and federal safety and health standards.
- Vendors, customers, contractors and subcontractors are responsible for complying with all applicable, local, state and federal safety and health standards.

What is OSHA?

- Occupational Safety and Health Administration
- Responsible for worker safety and health protection

Is there a need for OSHA?

Each year:

- Nearly 6,000 workplace fatalities occur.
- 50,000 deaths from workplace-related illnesses are reported.
- 5.7 million non-fatal workplace injuries happen.
- Injuries alone cost U.S. businesses over \$125 billion.

Since 1970 OSHA has:

- Helped cut the work-related fatality rate in half.
- Worked with employers and employees to reduce workplace injuries and illnesses by 40 percent.
- Virtually eliminated brown lung disease in the textile industry.
- Reduced trenching and excavation fatalities by 35%.

What does OSHA do?

- Encourages employers and employees to reduce workplace hazards and implement new or improve existing safety and health programs.
- Develops and enforces mandatory job safety and health standards.
- Maintains a reporting and recordkeeping system to monitor job-related injuries and illnesses.
- Provides assistance, training and other support programs to help employers and workers.

Who is covered by OSHA?

- Most private sector employees.
- Coverage is provided directly by federal OSHA or through an OSHA-approved state program.
- Does not cover the self-employed or immediate members of farm families that do not employ outside workers.

What are workers' responsibilities?

- Read the OSHA poster.
- Follow the employer's safety and health rules and wear or use all required gear and equipment.
- Follow safe work practices for your job, as directed by your employer.
- Report hazardous conditions to a supervisor or safety committee.
- Report hazardous conditions to OSHA, if employers do not fix them.
- Cooperate with OSHA inspectors.

How Does Your Safety and Health Program Rate?

Manag	ement Leadership and Employee Participation
Worksit	re Safety and Health (S&H) Policy:
A.	Workforce can explain, and fully embraces.
В.	Majority of personnel can explain policy.
C.	Some personnel can explain policy.
D.	Management can provide or state (where appropriate) a policy.
E.	There is no apparent policy.
Clear G	oals and Objectives, Set and Communicated:
A.	Workforce fully embraces goals and can explain desired results and measures
	for achieving objectives.
В.	Majority of personnel can explain desired results and measures for achievement.
C.	Some personnel can explain desired results and measures for achievement.
D.	Management can provide or state (where appropriate) goals and objectives.
E.	No apparent safety and health goals or objectives.
Manage	ement Leadership:
A.	All personnel can give examples of management's active commitment to safety and health.
В.	Majority of personnel can give examples of management's active commitment to safety and health.
C.	Some personnel can give examples of management's active commitment to safety and health.
D.	Some evidence exists that management is committed to safety and health.
E.	Safety and health does not appear to be a management value or of significant concern.
Manage	ement Example:
A.	Personnel reports that management always follows the rules and addresses the safety behavior of others.
В.	Management follows the rules and usually addresses the safety behavior of others.
C.	Management follows the rules and occasionally addresses the safety behavior of others.
D.	Management generally appears to follow basic safety and health rules.
E.	Management does not appear to follow the basic safety and health rules set for others.
Employ	ee Involvement:
A.	All personnel have ownership of safety and health goals and can describe their active roles.
В.	Majority of personnel feel they have a positive impact on identifying and resolving S&H issues.

Some personnel feel they have a positive impact on identifying and resolving S&H issues. Employees frequently feel their safety and health input will be considered by supervision.

E.	Employee involvement in safety and health issues is not encouraged or rewarded.
Assigne	ed Safety and Health Responsibilities:
A.	All personnel can explain what is expected of them and all elements appear to be assigned.
В.	Majority of personnel can explain what is expected of them.
C.	Some personnel can explain what is expected of them.
D.	Evidence exists that performance expectations are spelled out for all personnel.
E.	Specific job requirements and performance expectations are generally unknown or hard to find.
Author	ity and Resources for Safety and Health:
A.	All personnel believe they have the necessary authority and resources to meet their safety responsibilities.
В.	Majority of personnel believe they have the necessary authority and resources to do their job.
C.	Authority and resources are spelled out for all but there may be a reluctance to use them.
D.	Authority and resources exist but most appear to be out of the control of the employee.
E.	Personnel do not appear to have adequate authority and resources to perform assigned responsibilities.
Accoun	tability:
A.	Personnel are held accountable and all performance is addressed with appropriate consequences.
В.	Accountability systems are in place but consequences used tend to be for negative performance only.
C.	Personnel are generally held accountable but consequences rarely follow performance.
D.	Accountability exists but it appears to be generally hit or miss and prompted by serious negative events.
E.	There does not appear to be any effort at accountability.
Prograi	m Review (Quality Assurance):
A.	In addition to a comprehensive review, a process is used which drives continuous correction.
В.	A comprehensive review is conducted at least annually and drives appropriate program modifications.
C.	A program review is conducted, but does not appear to drive all necessary program changes.
D.	Changes in programs are driven by events such as accidents or compliance activities.

E. There is no evidence of any program review process.

Workpl	are	Ana	WCIC
VVUINDI	ucc	лич	V 313

Hazard Identification (Expert Survey): _____

- A. In addition to corrective action, regular expert surveys result in updated inventories.
- B. Comprehensive expert surveys are conducted periodically and drive appropriate corrective action.
- C. Comprehensive expert surveys are conducted but updates and corrective action sometimes lags.
- D. Qualified safety and health experts survey in response to accidents, complaints or compliance activity.
- E. There is no evidence of any comprehensive expert hazard survey having been conducted.

Hazard Identification (Change Analysis): _____

- A. In addition to team analysis, employees affected are involved in all reviews.
- B. A review of all planned/new facility, process, material or equipment is conducted by a competent team.
- C. Planned/new facilities, processes, materials or equipment considered high hazard are reviewed.
- D. Hazard reviews of planned/new facilities, processes, materials or equipment are problem driven.
- E. No system or requirement exists for hazard review of planned/new operations.

Hazard Identification (Routine Hazard Analysis): _____

- A. Employees have input to the analysis for their jobs.
- B. A current hazard analysis exists for all jobs, processes or phases and is understood by all employees.
- C. A current hazard analysis exists for all jobs, processes or phases and is understood by many employees.
- D. A hazard analysis program exists, but it may not cover all jobs and/or few are aware of results.
- E. There is no routine hazard analysis system in place at this facility.

Hazard Identification (Inspection): _____

- A. Well-trained employees at all levels conduct frequent and varied inspections; hazards of any kind are rare.
- B. Inspections are conducted by trained personnel and all items are corrected; repeated hazards seldom found.
- C. Inspections are conducted by trained personnel and most items corrected; some hazards still in evidence.
- D. An inspection program exists but coverage and corrective action is not complete; hazards in evidence.
- E. There is no routine inspection program at this facility; many hazards can be found.

Hazard Reporting Sys	stem:
----------------------	-------

- A. Employees feel comfortable identifying and self-correcting hazards.
- B. A comprehensive system for gathering hazard information exists; it is positive, rewarding and effective.
- C. A system exists for hazard reporting; employees feel they can use it but it may be slow to respond.
- D. A system exists for hazard reporting, but employees may be unclear about its use or find it unresponsive.
- E. No formal hazard reporting system exists and/or employees do not appear comfortable reporting hazards.

Accident/Incident Investigation: _____

- A. All loss-producing incidents and "near misses" are investigated for root cause with effective prevention.
- B. All OSHA-reportable incidents are investigated and effective prevention is implemented.
- C. OSHA-reportable incidents are generally investigated but cause identification/correction may be inadequate.
- D. Some investigation of incidents takes place, but root cause is seldom identified, correction is spotty.
- E. Injuries are either not investigated or investigation is limited to report writing required for compliance.

Injury	/Illness	Analy	/sis:	
--------	----------	-------	-------	--

- A. All employees are fully aware of incident trends, causes and means of prevention.
- B. Trends are fully analyzed and displayed, common causes communicated and management ensures prevention.
- C. Data is centrally collected and analyzed and common causes are communicated to concerned supervisors.
- D. Data is centrally collected and analyzed but not widely communicated to aid prevention.
- E. Little or no effort is made to analyze data for trends, causes and prevention.

Timely Hazard Control: _____

- A. Hazard controls are fully in place, known to and supported by workforce, with concentration on engineering controls and reinforced/enforced safe work procedures.
- B. Hazard controls are fully in place with priority to engineering controls and safe work procedures.
- C. Hazard controls are fully in place but order of priority is variable.
- D. Hazard controls are generally in place but priority and completeness varies.
- Hazard control is not considered complete, effective and/or appropriate in this facility.

Facility/Equipr	ent Maintenance:

- A. Operators are trained to recognize maintenance needs and perform/order maintenance on schedule.
- B. An effective preventive maintenance schedule is in place and applicable to all equipment.
- C. A preventive maintenance schedule is in place and is usually followed.
- D. A preventive maintenance schedule is in place but often allowed to slide.
- E. There is little or no attention paid to preventive maintenance; breakdown maintenance is the rule.

Emergency Planning and Preparation: _____

- A. As a result of effective planning, training and drills, all personnel know immediately how to respond to emergencies.
- B. As a result of effective planning, training and drills most employees have a good understanding of emergency responsibilities.
- C. There is an effective emergency response team but others may be uncertain of their responsibilities.
- D. There is an effective emergency response plan but training and drills are weak and roles may be unclear.
- E. Little or no effort is made to prepare for emergencies.

Emergency Equipment: _____

- A. Facility is fully equipped for emergencies; all systems and equipment are in place and regularly tested.
- B. Facility is well-equipped with appropriate emergency phones and directions, and most people know what to do.
- C. Emergency phones, directions, and are in place, but only emergency team knows what to do.
- D. Emergency phones, directions, and equipment are in place, but employees show little awareness.
- E. There is little evidence of an effort to provide emergency equipment and information.

Medical Program (Health Providers): _____

- A. Occupational health providers are regularly on-site and fully involved in hazard identification and training.
- B. Occupational health providers come when needed and are generally involved in assessment and training.
- C. Occupational health providers are frequently consulted about significant health concerns.
- D. Occupational health providers are available but normally concentrate on clinical issues.
- E. Occupational health assistance is rarely requested or provided.

Medical Program (Emergency Care): _____

- A. Personnel fully trained in emergency medicine are always available on-site.
- B. Personnel with basic first aid skills are always on-site.
- C. Personnel with basic first aid skills are usually available with community assistance nearby.
- D. Either on-site or nearby community aid is always available on every shift.
- E. Neither on-site nor community aid can be ensured at all times.

Safe	tv and	Health	Training
------	--------	--------	-----------------

Employees Learn Hazards, How to Protect Themselves and Others:

- A. Employees demonstrate proficiency in, and support of, all areas covered by training.
- B. Facility is committed to high quality employee hazard training and ensures all participate and receive regular updates.
- C. Facility provides legally required training and makes an effort to include all personnel.
- D. Training is provided when the need is apparent; experienced personnel assumed to know material.
- E. Facility depends on experience and informal peer training to meet needs.

Supervisors Learn Responsibilities and Underlying Reasons: _____

- A. All supervisors assist in workplace analysis, ensure physical protections, reinforce training, enforce discipline and can explain work procedures based on training provided to them.
- B. Most supervisors assist in worksite analysis, ensure physical protection, reinforce training, enforce discipline and can explain work procedures based on training provided to them.
- C. Supervisors have received basic training, appear to understand and demonstrate importance of worksite analysis, physical protections, training reinforcement, discipline and knowledge of procedures.
- D. Supervisors make reasonable effort to meet safety and health responsibilities but have limited training.
- E. There is no formal effort to train supervisors in safety and health responsibilities.

Managers Learn Safety and Health Program Management: _____

- A. All managers have received formal training in S&H management and demonstrate a full understanding.
- B. All managers follow and can explain their roles in S&H program management.
- C. Managers generally show a good understanding of their S&H management role and usually model it.
- D. Managers are generally able to describe their S&H role but often have trouble modeling it.
- E. Managers generally show little understanding of their S&H management responsibilities.

Safety and Health Program Self-Assessment Score Sheet

	Total Score	
retained of Endinge	~ 0 –	
Total number of E ratings	× 0 =	
Total number of D ratings	 × 1 =	
Total Hulliber of Challings	 × Z –	
Total number of C ratings	× 2 =	
Total number of B ratings	 × 3 =	
Total number of P retings	. . .	
Total number of A ratings	 × 4 =	

This worksheet is distributed and used by Kentucky OSHA during the review of safety and health programs. Most programs that qualify for the Voluntary Protection Program (VPP) in the state of Kentucky have scores greater than 50. This sheet can help you assess which areas of your program might need further review and improvement.

Keys to a Successful Safety and Health Program

Visible management involvement — from the executive level to the frontline supervisor — forms the basis for a well-run organization. The same is true for the organization's safety program. Safety is an intricate part of every operation or department within any organization — *it does not stand alone* or remain separate from the main purpose of the organization (e.g., service, goods or products).

A successful safety and health program requires that:

- All levels of management be responsible and held accountable for providing good examples to the organization's employees.
- Infractions of the organization's rules or safe work practices never go unnoticed.
- Executive management be responsible for providing a workplace free of recognized hazards.
- Safety and health expectations be set for all employee levels within the organization.
 - o Establish safety and health responsibilities within each job classification description.
- Contractors be held to the same safety and health expectations as the organization's employees.
 - o In pre-bid qualifications, specify acceptable levels of experience modifier rate (EMR) in the contract; the EMR may be obtained from the contractor's insurance company.
 - Spell out precisely the type of safety and health program that is acceptable in the contract; the very
 minimum is compliance with all local, state, and federal safety and health regulations (e.g., U.S.
 Department of Labor, Occupational Safety and Health Administration).
 - o Include in the contract what will happen if the contractor fails to comply.
 - Specify the arrangements that will be made for exchange of safety and health information between the organization and the contractor (e.g., MSDSs and evacuation and other emergency plans).
- A system to identify, track, and correct identified hazards and potential hazards be developed and implemented.
- A safety and health policy reflecting the organization's commitment towards safety and health (signed by the top executive) be developed and maintained.
- Written safety and health programs be developed.
- The organization complies with all state or federal OSHA investigations.

Developing a Safety Program — Begin With the Basics

Many organizations have reduced their injury rates by implementing safety programs as an integral part of their overall risk management operation. Top management *support, commitment* and *involvement* are the keys to a successful safety program.

1. Each location must develop a written safety and health policy statement that clearly communicates to the staff top management's commitment and vision for a workplace free of recognized hazards.

The written statement should include top management's philosophy, commitment and expectations — to serve as a guide for showing that:

- All occupational injuries/illnesses can be prevented.
- All operating risks can be eliminated or adequately safeguarded.
- Superior safety is crucial in improving the work environment.
- All levels of management will be responsible and held accountable for staff safety.
- All employees will be trained in and be expected to follow safety and health practices established by the organization as a condition of employment.
- 2. Each location must have in place a formal organization to manage its safety and health program. Everyone within the organization must understand his or her roles and responsibilities for an effective safety and health program for the staff. Regardless of who is spearheading the safety and health program, that individual (or individuals) must be placed high enough in the organization's structure to ensure access to top management.
- 3. Use annual planning to establish written goals, objectives and action plans based on current performance; however, numerical goals alone are not enough. Activities, programs and development of internal controls are needed to maintain a thriving and active safety and health program.
- 4. Written policies and procedures must be established and reviewed with both full-time and part-time staff. Line management must oversee compliance with established policies, procedures and rules.
- 5. Establish an incident investigation procedure, which at the very least must be performed for all occupational fatalities, lost-time injuries/illnesses and near misses.
- 6. Managers and supervisors of all departments must be held <u>responsible and accountable</u> for the safety management practices implemented in their area of responsibility. This includes at the very minimum the following: investigation of employee injuries and near misses, area inspections and staff training. Job descriptions are a key management tool for assigning safety responsibility and accountability.
- 7. Develop tools to "assess, prevent and control," and provide ongoing surveillance of all facility operations as they relate to safety activities. These principles and practices must be applied in the planning, design and layout of any new buildings, grounds or operations. These factors must also be included in preventive maintenance activities and/or changes in any existing building, ground or operation.

- 8. On a periodic basis, staff and management from each department or area shall conduct routine department or area inspections. Top management should perform additional spot check audits. Because a sound inspection is based on the knowledge possessed by the inspector, before implementing a self-inspection program provide training on how to identify and correct hazards. The inspector may use a variety of inspection checklists.
- 9. Continual education and training must be provided and effectiveness reviewed annually. Initial training must include an orientation to the organization's safety program, philosophy and culture, along with job-specific training. Training must also be initiated when a staff member transfers to a new job, or when there is a change in an operation. Establish a yearly training program that outlines who will conduct the training, as well as the topics and dates. Invite guest speakers for variety, and include both on- and off-the-job safety topics.
 Regardless of the length of the training, document it with the following information: sign-in sheets, a training course syllabus, date of training, and name of the instructor. Verify that learning has occurred through testing or on-the-job observations.
- 10. Establish an ongoing means of communicating safety and health issues and information. At a minimum, the communication system should include:
 - Scheduled safety meetings held by management (include videos and handouts)
 - Short safety meetings in the work area
 - Newsletters
- 11. Each location must establish a means for managing the safety and health documents. The following issues should be addressed:
 - Medical confidentiality
 - Security
 - Access
 - Retention
 - Distribution
- 12. Evaluate the entire safety and health program's performance on an annual basis.

Creating a Safety and Health Policy

A generic safety and health policy will not fulfill the goals of your organization. Develop a specific company-wide written safety and health policy based on the company's mission statement. If a mission statement does not exist, develop the safety and health policy based on the company's value system, style and customer focus. For this policy to be effective, it is critical to communicate it effectively and clearly to all employees.

An effective safety and health policy includes the following elements:

- **Introductory statement:** Clear, simple expression of top management's commitment and attitude about employees' safety and health.
- **Purpose/philosophy:** State the purpose or philosophy of the policy. For example: all occupational injuries and illnesses are preventable; all operating risk can be eliminated or adequately safeguarded. These statements remind all employees about the purpose and value of safety and health programs.
- Management responsibilities: State in the policy that managers at all levels are responsible and accountable for the safety and health program within their respective areas.
- **Employee responsibilities:** State in the policy that all employees will receive training in, and are expected to follow, established safety and health practices.
- Closing statement: Reaffirm the company's commitment to a safe and healthy workplace.
- **Signature:** The owner, upper administration, unit or area managers and union representative, if applicable, should sign the policy. This signifies to the reader the commitment the company has for the policy.
- **Date:** Include the date the document was generated.
- **Updates:** Revise the document when there is a change in the organization's focus or responsibilities of the individuals who have signed the statement.

Maintaining a current safety and health policy is a very important step in keeping safety awareness alive. A current policy communicates the continual commitment the company has toward the total Loss Control program — where safety and health play a major role.

Sample Safety and Health Policy

Our company believes that employees are our most important asset. Therefore, we will strive to provide a safe and healthy work environment.

Our goals include eliminating the accidents that cause injury to our employees and visitors, property loss, and interrupt our business. Management and employees will work together in planning, developing, and implementing safe and healthy work methods, practices and programs.

All managers and supervisors of this company have the responsibility to ensure that each employee receives the training and instruction necessary to perform his or her work safely. Management of this company is accountable for providing a workplace free of recognizable hazards that might cause injuries and/or illnesses. All management will set a good example by complying with company rules for safety and health.

All employees play a part in the prevention of workplace illnesses and injuries. We expect all employees to follow company policy and give their full support to safety and health issues and programs.

With the total commitment of management and employees, elimination of most accidents, injuries, and workplace illnesses are achievable goals. A safe workplace is a productive workplace.

I am (We are) personally committed to the continual improvement of our safety and health performance and will authorize the actions necessary to achieve these objectives. I will (We will) expect your participation in our safety and health efforts.

Signatures of the President/Owner,	
Top Management,	
Union Representative (if applicable)	(Date)

Job Safety Analysis Procedure

There are two types of systems to use when conducting a job safety analysis. The first type is direct observation, which involves watching a competent person perform a job, identifying job steps, and analyzing each step for possible problems. The second type centers on group discussion of a job. This approach uses the knowledge of the group to identify necessary steps. This method is primarily used for new jobs and when observation would be dangerous or impractical.

- Prioritize jobs for analyzing using the following criteria: possibility of serious injury, probability of injury is high, property could be damaged severely, incidents could incur significant liability or public reaction, production or quality could be affected significantly.
- 2. Focus on a particular job. Decide whether to analyze it by observation of the worker or by discussion among several competent workers.
- 3. Determine the purpose of the job, who is responsible for performing the job, what activities are involved, when and where is the job done.
- 4. Use the following Job Safety Analysis Worksheet to record observations. An interview of the worker should be conducted if the observer is not familiar with the job or task being analyzed.
- 5. Break the job into steps or a series of steps or tasks. To determine where a step begins, look for changes in activity, direction or position. Watch for potential hazards.
- 6. Devise methods to control or reduce each inherent hazard.
- 7. Write a standard job procedure or a job instruction, or devise a safe work practice as appropriate.
- 8. Use the procedure, instruction, or practice in employee training, retraining, safety meetings, evaluations of worker performance and incident investigations.
- 9. Review and revise the analysis periodically when conditions change such as when new machinery is acquired or production process is revised.
- 10. Reinforce employee compliance with procedures, instructions and practices.

Job Safety Analysis Worksheet

Job description:	Location:				
Work hours:		Days/week:			
Meal break(s):	Overtime:				
The job can cannot	be modified to a	ccommodate an inj	ured or disabled w	vorker.

Lifting (up to 10 lbs.)		Occasionally	Fraguently	Constantly	
Lifting (11–24 lbs.)	Never	Occasionally (0-2 hrs/day)	Frequently (2–6 hrs/day)	Constantly (6–8 hrs/day)	
Lifting (25–50 lbs.)					
Carrying (up to 10 lbs.)					
Carrying (11–24 lbs.)					
Carrying (25–50 lbs.)					
	1		L	1	

The heaviest item lifted o	n the job is	It weighs	and is lifted	times per day
The heaviest object carrie	ed while the work	ker walks from place to place is	;	It weighs
and is carried	_ times per day. ⁻	The heaviest weight pushed or	pulled is	It weighs
and is pushed or pulled _	times per	day.		

Physical movements required on the job:

	Never	Occasionally (0–2 hrs/day)	Frequently (2–6 hrs/day)	Constantly (6–8 hrs/day)
Sitting				
Standing				
Twisting at neck				
Twisting at waist				
Bending at knees				
Bending at waist				
Bending at neck				
Squatting				
Kneeling				
Fine manipulation				
Repetitive hand use				
Simple grasping				
Power grasping				
Climbing stairs				
Climbing ladders				
Walking indoors				
Walking outdoors				
Working at heights				
Reaching above shoulder				
Reaching at shoulder				
Reaching below shoulder				

Hazard Recognition

The five steps of *hazard recognition* are:

1. Surveys/observation

- Housekeeping (oil on floor, oily rags, paper, clutter, scrap, cords on floor, trash and tools not put away)
- Guards missing
- Work practices If it does not look right, it probably isn't!
- Personal protective equipment
- Fire hazards (extinguishers checked once a month)
- Use of tools (using wrench for hammer)
- Use of lifting devices (not using handcarts)
- Ergonomic problems (poor workplace design; repetitive motions; excessive lifting; pulling; reaching; awkward position of wrist, arm, or chairs)

2. Review of accident reports/near misses

Look for patterns with people and/or locations or similar types of accidents — is there something I am
missing?

3. Listen to employees during a walk-through

• Listen to employees — they know better than anyone what problems exist. Make sure employees feel free to give suggestions.

4. Meetings

Meet with employees once a week — 5, 10 or 15 minutes to review any concerns or observations they
may have.

5. Job safety analysis

Sequence of steps; list potential hazards; suggest solutions.

Correcting the Problem

- 1. Correct what you can "on-the-spot."
- 2. See to it that the right person receives word of the problem (in writing) your manager, maintenance/engineering, another supervisor, etc.
- 3. Follow up to see if it was completed.

Accident (Incident) Investigation

Investigate matters of public concern or those that involve a serious injury or fatality. The use of a dollar value is not an appropriate basis for prioritizing an investigation; all accidents should be investigated and documented, including minor mishaps or near misses (see the Sample Employee Accident Investigation Report on Page 32).

An investigation should cover three distinct areas:

- What took place prior to the incident?
- Gather the factual information concerning the incident.
- The follow-up action phase often the most neglected aspect of the investigation.

Who Should Conduct the Investigation?

- The supervisor and/or foreman are the individuals closest to the action, but they seldom have had the training to conduct an investigation.
- It is reasonable to expect the supervisor to conduct the investigation because he/she has knowledge of the area, the equipment and the personnel. The reasons that make the supervisor or foreman the ideal person to conduct the investigation are also the reasons why he/she should *not* do it. His/her people and equipment could have been potentially involved.
- Investigation teams provide a broad base of experience, background and credibility to the investigation.

Preparing for an Investigation

- Pre-accident planning should provide clear, concise instructions on what to do, when to do it, and who will do it.
- The pre-plan should include at least the following:
 - O How to notify the individuals involved in the investigation
 - How to save lives
 - How to protect lives and property from additional loss
 - How to assure a timely investigation
- Investigator training provide each person who may participate in an investigation with initial training and periodic follow-up training.
- Investigation kits should be developed and maintained. The kit should include the following:
 - o Camera and film
 - o Clipboard, paper and ink pen
 - Copy of regulations or standard operating procedures
 - Report forms
 - o Personal protective equipment
 - First aid kit

- o Digital audio recorder or cassette recorder and spare cassettes
- Identification tags
- Specimen containers
- High visibility tape
- Graph paper

Remember to check the kit periodically and refill it following every investigation!

Priorities

- Prioritize the investigation process:
 - Save lives
 - Prevent further injury and property loss
- Remember respond quickly in a manner that places no one at risk of an additional injury or exposure.
- Arrive safely to the scene. It is most unlikely that the investigator or team will be the first on the scene. The investigator will be expected to be an "expert" and advise individuals on how the matters should be handled.
- Observe the overall scene on arrival and begin planning your approach:
 - Observe the total picture
 - Categorize your priorities
 - Is additional help required?
 - Are the injured obtaining help?
 - o Protect others from injury
 - Protect property from further damage
- If the scene is in the hands of the firefighters, police, or medical personnel, do not enter unless instructed to do so.
- As the incident is being investigated, be sure to:
 - o Preserve the evidence
 - o Protect the incident site
 - o Secure the evidence
 - o Keep upper management informed

Interviewing the Witnesses

- Take charge only after the firefighters or police have completed their job.
- Interview anyone who can aid in the investigation process.
- Conduct the interview as soon as practical to ensure the integrity of the information.

Preservation of Evidence at the Scene

- Time available to conduct an inspection will be limited.
- Develop rough sketches of the incident area.
- Take pictures of the area involved.
- Take samples of the evidence and clearly mark the containers (include location).

Major Injury Categories

- Struck by injured employee was struck by an external source
- Struck against injury resulted from employee hitting something
- Slip/trip/fall employee lost his or her balance, resulting in an injury
- Caught between fingers, hands, or arms caught by nip points or pinch points
- Eye any injury to the eyes falls in this category
- Body mechanics this category includes strains, back injury, or cumulative trauma; injury results from the use of the limb or torso, not caused by an external source
- Laceration/cut/tear/puncture injury caused by using tools or sharp edges (even paper cuts)
- Hot/cold temperature injury resulting from a burn or frostbite

Summary of the Occupational Injuries and Illnesses Log

- Each employer who is subject to the recordkeeping requirements of the Occupational Safety and Health Act
 of 1970 (P.L. 91-595) and Act 154, P.A. 1974 must maintain a log of all recordable occupational injuries
 and illnesses for each establishment
- An OSHA Form 300, 300-A and 301may be used
 - A substitute for the OSHA Form 300, 300-A and 301 may be used as long as it is detailed, easy to read, and understandable.
- All occupational illness must be reported, regardless of severity (acute or chronic)
 - Occupational skin diseases or disorders
 - Dust diseases of the lungs (pneumoconiosis)
 - Respiratory conditions due to toxic agents
 - Poisoning (systemic effects of toxic materials)
 - Disorders due to physical agents (other than toxic materials)
 - Disorders associated with repeated trauma
 - o All other occupational illnesses
- Report workplace injuries if they result in one or all of the following:
 - Death of one or more workers
 - Loss of consciousness of one or more workers
 - Medical treatment beyond in-house first aid
 - One or more lost workdays
 - Restricted motion or restrictions to the work an employee can perform
 - Transfer of an employee to another job
- Recording requirements
 - A recordable case must be entered on the log within seven calendar days after learning of its occurrence
- Medical treatment
 - Treatment other than first aid, administered by a physician or a registered professional person under the standing orders of a physician
 - Non-medical treatment first aid or one-time treatment and observation of minor scratches, cuts, burns, splinters, etc. that do not ordinarily require medical care
- Log retention
 - Logs must be maintained and kept on file for five years following the end of the calendar year to which they relate
 - Keep logs available for inspection
- Log posting
 - A copy of the totals and information following the fold line of the last page for the year must be posted by Feb. 1 and remain in place until April 30 (see the Sample OSHA 300 log on the following pages).
 - o If no injuries or illnesses have occurred for the year, zeros must be entered on the totals lines

Attention: This form contains information relating to employee health and must be used in a manner that protects the confidentiality of employees to the extent possible while the information is being used for occupational safety and health purposes. OSHA's Form 300 Year 200x Log of Work-Related Injuries and Illnesses U.S. Department of Labor You must record information about every work-related injury or illness that involves loss of consciousness, restricted work, activity or job transfer, days away from work, or medical treatment begond first sid. You must also record significant work-related injuries and illnesses that are diagnosed by a physician or licensed health care professional. You must also record work-related injuries and illnesses that meet any of the specific recording criteria listed in 29 CFF 1904.8 through 1904.12. Feel free to use two lines for a single case if you need to. You must complete an injury and liness sincident report (DSHA Form 301) or equivalent form for each injury or illness recorded on this form. If you're not sure whether a case is recordable, call your local OSHA office for help. Form approved OMB no. 1218-0176 Establishment name Identify the person Describe the case Classify the case Enter the number of days the injured or ill worker was: (D) Date of injury or onset of illness (mo./day) (E) Where the event occurre Loading dock north end) (F) Describe injury or illness, parts of body affected, and object/substance that directly injured or made person ill (e.g. Second degree burns on right forearm from acetylene torch) (C) Job Title (e.g., Welder) Skin Disorder (1) (2) (3) (4) (5) (J) (K) Page totals & 6 6 6 6 Be sure to transfer these totals to the Summary page (Form 300A) before you post it. Public reporting burden for this collection of information is estimated to average H minutes per response, including time to review the instruction, search and gather the data needed, and complete and review the collection of information. Persons are not required to respond to the collection information unless it displays a currently valid DMB control number. If you have any comments about these estimates or any aspects of this data collection, contact: US Department of Labor, OSHA Office of Statistics, Room N-3644, 200 Constitution Ave, NV, Washington, DC 20210. Workers' Compensation

Workers' Compensation Laws

- In the United States, there are at least 53 separate workers' compensation laws.
- Each state has its own workers' compensation law.
- The federal government has three compensation programs:
 - o Federal Employees Compensation Act (FECA)
 - Longshore and Harbor Workers' Compensation Act
 - District of Columbia Workers' Compensation Act
- There are two types of workers' compensation laws:
 - Compulsory law all employers under this jurisdiction are required to accept the provisions and provide benefits as specified
 - Elective law all employers under this jurisdiction have the right to accept or reject participation
 If an employer rejects compliance with the law, the result is the loss of the three common-law defenses,
 which renders the employer defenseless. Most of the laws currently are compulsory

Workers' Compensation Objectives

- Promptly replace lost income and provide medical treatment
- Stimulate employer interest in accident investigation, reduction and prevention
- Provide rehabilitation to restore earning and working capability
- Reduce costly litigation and delays
- Reduce financial drain on public and private charities

Who Is Covered By Workers' Compensation?

- 90% of all hourly and salaried employees are covered by workers' compensation
- Some employment categories are excluded (these vary from state to state); the most
 - common are:
 - Self-employed (owner)
 - Professional athletes
 - Short-term temporary laborers
 - Seasonal or agricultural farm laborers
 - Volunteer workers
 - Workers covered by other labor laws (such as railroad and maritime workers who are specifically listed under the acts)

Types of Disabilities

- **Temporary Total Disability** the worker is completely unable to work for a period of time because of a job-related injury; full recovery and return to work are expected; most disability cases are of this type
- **Temporary Partial Disability** the worker is unable to perform his or her regular job duties while recovering from the injury, but has the ability to work at a position requiring less stress and strain on the worker; full recovery and return to work are expected
- **Permanent Partial Disability** the worker has some permanent reduction associated with his or her work capability, but is still able to be employed
- Permanent Total Disability the worker is injured on the job and can no longer work, even following
 medical and rehabilitative treatment

Workers' Compensation Benefits

- Payment for expenses associated with medical, burial, lost wages, and impairments.
- Physical and vocational rehabilitation.
- Some workers' compensation laws provide for mental rehabilitation.

Workers' Compensation Cost

- An estimated \$25 billion is spent by U.S. employers for workers' compensation
 - 22% is spent on medical care
 - o 46% is spent on compensation payments
- Workers' compensation insurance premiums are based on employee payrolls
- The National Council on Compensation Insurance, an actuarial organization, sets basic premium rates for most states
- State rates reflect the different risks and claim histories associated with the different types of operations or activities

Type of Rates

There are four key methods used to establish insurance premium rates; all are dependent on the applicable compensation laws.

- Manual Rate premiums are applied directly from the state rate book
- **Schedule Rate** employers received a percentage reduction in premium rates by reducing specific hazard activities, which are listed in a schedule
- Experience Rating Prospective the accident experience record of the policyholder will influence future premiums
 - The experience period will not be more than three years, beginning four years before, and ending one year prior to, the start date of the experience modification

- o Immediate past-year results will impact the organization/company premiums for three policy years beginning one policy year *after* the year in which the loss was incurred
- o Each state sets average losses by employment classification
- The following formula is used to determine the expected losses:
 Average Losses (set by state) × Payroll for Category = Expected Losses
- When the employer's real time losses exceed the expected state average loss rates, a surcharge will be added to the policyholder cost
- When the employer's real time losses are *less* than the expected state average loss rates, a credit will be applied to the policyholder
- A surcharge or credit is called an experience multiplier, experience modification or experience rating modifier (MOD rate) — it is an incentive for implementing a company-wide loss control program
- Examples of MOD rate equations:

The past three-year history of experience rating modifiers for a roofing operation with 1.32, 1.04, and 0.88 payment history would be:

```
1.32 × $38,223 = $50,454.36

1.04 x $38,223 = $39,751.92

1.00 x $38,223 = $38,223.00

0.88 x $38,223 = $33,636.24
```

A good MOD rate is equal to 1.0 or less

- Retrospective rating relates premiums to experience during the current policy period; the employer pays
 the expected premium at the start of the policy period, then adjustments may be made at the end of the
 period reflecting injury/loss during that time
- **Premium discounts** administrative costs are relatively less for a large policy than a small policy; states permit discounts for premiums in graduated steps based on total premiums paid

Hold Down the Cost of Workers' Compensation

- Prevent accidents from happening in the first place by having a formal organization for managing a company/organization-wide safety and health program.
- Develop a written safety and health policy statement that is based on company/ organization values.
 - o Clearly spell out and demonstrate daily top management's commitment and vision.
- Report all incidents immediately.
 - Injury claims reported 10 days after the event may result in a 50% increase in litigation.
- Monitor claims of all types by reviewing your loss run information.
- Refer injured workers to a recommended health care provider.
- Establish a return-to-work program.

Injuries on the Job

Body parts (based on the percent of claims) most often injured in work-related activities:

1.	Back	22%
2.	Hands and fingers	18%
3.	Legs	13%
4.	Arms	10%
5.	Multiple injuries	10%
6.	Trunk	9%
7.	Eyes and head	8%
8.	Feet and toes	6%
9.	Body system	2%
10.	Neck	2%

Return-to-Work — Modified Duty

The goal of modified duty is to return the injured worker to work as soon as possible. The program does not ask persons who are ill or in pain to return to work, but it does identify tasks that serve the company and can be carried out on a temporary basis until the employee is fully recovered. This option has been proven to help the employee feel productive rather than disabled, and tends to speed the recovery process. The plan also reduces the number of lost time days, which in turn reduces premium costs.

Modified Work Programs

Listed below are some basic steps to use when developing a modified work program.

- Outline job task function (or combination of functions) that a worker, temporarily or permanently disabled, can safely perform.
- 2. Make sure work is productive and has value.
- Communicate with the treating physician, who must determine if the injured worker is capable of
 returning to work. Communicate by sending a letter and job description of work options available, and
 ask for the physician's cooperation in returning the employee to work.
- 4. Consider inviting area physicians or your local clinic physician to tour your facility and become familiar with your operation. Establish a relationship.

Maintenance of Records and Documents

A system must be established for documenting, maintaining, and managing records associated with the company's safety and health program. These records include accidents and near misses, the injury and illness log, employee medical reports, training, safety and health meetings, regulatory-specific requirements, incident investigation, workplace evaluations, and corrective measures implemented. The following key items should be addressed in any filing system selected to manage the safety and health records and documents:

- Regulator record retention requirements
- Confidentiality
- Who has access to the records

Look for These Key Elements When Choosing a Medical Provider:

- Does the provider have a broad base of occupational services?
- Is the staff available and knowledgeable in the wide areas of regulatory compliance (OSHA, EPA, DOT, to name a few)?
- Will the staff work well with the type of management style established at your organization or company?
- Does this provider have a proven track record in the area of Occupational Health? Do they have references you may check?

Medical Providers Key Services

Name of Pro	vider:
Date of Revi	ew:
	are key services a medical provider will need in order to service your employees. Rank the type of scale of 1–5, with 5 being the highest and 1 the lowest. A zero will indicate the material does not
Services prov	vided:
Prevention:	
	_ Pre-placement Exams
	_
	_ Spirometry
	_ Hearing Conservation
	_ Ergonomic Program
	_ Industrial Hygiene Program
	_ Respiratory Exams
	_ Surveillance Exams
Acute Care (Short Term):
	_ Initial Assessment
	_ Consultations
Rehabilitatio	on Programs:
	_ Job Safety Analysis
	_ Work Conditioning/Hardening
	_ Functional Capacity Exams
	_ Physical Capacity Exam
Employee A	ssistance Program:
	_ Drug
	_ Alcohol

Experience, Ed	lucation and Knowledge of the Staff:
	Board Certified Occupational Health Physicians
	Board Certified Physical Therapists
	Board Certified Industrial Hygienist
	Board Certified Occupational Nurses
	Board Certified Speech Pathologist
	Vocational Rehabilitation Counselors
Knowledge in	Regulations, such as:
	DOT
	Hearing Conservation
	Respiratory Protection
	Bloodborne Pathogen
	Confined Space
	Workers' Compensation Laws
Availability an	d Communication Capability:
	Obtain an appointment within 24 hours of request
	Available all shifts your organization or company works
	Location convenient
	Able to come to the worksite, with a mobile unit
	Phone calls are provided after treatment
	Fax, confidential
	1-800 numbers for out-of-state employees
	Written reports provided within 24 hours

Job Description

- Establish a written job description for each job, if one has not been developed.
- Include in this description the majority of tasks an individual in this position will perform, as well as knowledge and skill necessary to perform the job.
- List and label all essential and non-essential tasks, as well as the physical demands of the job.

Job Analysis

or ition. It

The following items should be reviewed and recorded for each job classification within your organization company. The job analysis will have to be updated as jobs change, are deleted, or added to your organization
is recommended the analyses be reviewed annually and signed off.
Physical Activity: Walking
Climbing Balancing Lifting
Pushing Pulling
Carrying Bending
Other
Working Environment:
Noise Dust
Paint Humidity
Standing long period of times on hard surfaces Exposure to hazardous chemicals and materials
Other
• Intensity of the work activity. How often is the task in question performed? Describe:

Influencing Individual Behavior Changes

As a supervisor, you are in the position of coaxing individuals to accept change. This process should be well-planned and follow these steps:

- Plan ahead by identifying how this change will benefit the individual.
- Establish a good time to discuss the change.
- Discuss the change and deal with the individual's concerns.
- Solve the problems that could come from the change together.
- Gain a commitment even if the individual is not willing to change, ask him or her to try it out briefly.

Nine mistakes to avoid when trying to bring about a change:

- 1. Acting without obtaining input.
- 2. Getting input but ignoring it.
- 3. Acting before planning ahead.
- 4. Failing to keep in mind change may threaten some individuals.
- 5. Forgetting to explain what is in it for the individuals involved in the change.
- 6. Being impatient.
- 7. Failing to recognize small, incremental changes.
- 8. Trying too much too fast.
- 9. Not communicating.
- Techniques to influence individual behavior:
 - Modeling the supervisor consistently demonstrates the proper technique for doing the job, accepting the responsibility for reporting and seeking corrections for unsafe acts and conditions
 - Rewards provide positive feedback when you observe the individual performing the work in a safe manner
 - Correction make corrections at the time you observe the individual performing an unsafe act or creating an unsafe condition
- Five steps to use when correcting an unsafe behavior:
 - 1. Identify the unsafe act.
 - 2. Restate your position it is not necessary to apologize.
 - 3. Demonstrate the correct method.
 - 4. Ensure the individual understands the required behavior change.
 - 5. Emphasize the importance of the individual's safety to you and the company.

Notes
